

“VIEW THRU™”

AN IMPROVED VIEWING SOLUTION FOR BICYCLE LOCKERS NOW AVAILABLE, A NEW GENERATION OF CYCLE-SAFE SECURITY OPTIONS

Since 2001, our world has changed. It has changed how we look at each other, live our lives and set our priorities.

Our policy at Cycle-Safe Co. is to provide optimum security for bicycles and we have made this our priority for 25 years. While we have offered and will continue to offer a viewing solution to check contents of bicycle lockers, we would like you to consider the following:

- **There has never been a bomb or explosion in a bicycle locker.**
Terrorists target heavy traffic areas. Bicycle lockers are generally located outside a building or further away from volumes of people.
- **A door with a view can provide a peek into a locker, but not a full view.** Security personnel could open a door with a master key and get a full view in about the same amount of time.
- **A parked car is a higher risk target than a bicycle locker.** Bicycle lockers should be issued with written lease agreements that require identification to track the users for membership based mid-term or long-term bicycle parking.
- **More bicycle lockers contribute to less parked cars.** To encourage bicycle use reduces the dependency on foreign oil.

Cycle-Safe Co. pioneered the bicycle locker with a viewable door. If visibility into the locker is necessary for your location, we have a viewable solution without compromising security.

The reality of terrorism is real, and being in the security business for 25 years, we understand that. Please contact us to discuss your security issues. We're here to contribute, as much as we can, to a better world.

Please contact Cycle-Safe Customer Support for details on View Thru™ options available.
